ELECTRONIC REMOTE MONITORING FOR WILDLIFE CONTROL

Spend less time checking empty traps, spend more time growing your business

Skyhawk Trapmate: Your quickest path to state-of-the-art trap monitoring

Trapmate was designed to work the way you do, so that adding monitoring is an evolution, not a revolution, in how you do business.

Use the traps you already have

We've engineered devices and adapters that let you add electronic remote monitoring to whatever traps you already use, so you don't need to buy new traps.

Enjoy the highest accuracy of any trap monitoring system

No one likes false or missed alerts. We've spent years engineering optimized sensors for different trap types that give you with as close to 100% accuracy as you can get.

Earn a better return on your monitoring investment

Using the traps you already have is only the start. Other vendors make you replace your sensors when the batteries run out – with Trapmate, you just replace the batteries.

Since we manufacture our own devices, we're able to offer them to you for less.

Self-Powered, Drop-and-Go True Remote Monitoring

Trapmate Hub

Drop-and-go battery-powered Hub you can place virtually anywhere with a built-in cellular signal to monitor hundreds of sensors.

Vibration/Magnet Sensor

Equipped with a reed switch and accelerometer, this device delivers near-perfect accuracy for monitoring snap and animal traps.

PIR Motion Sensor

Designed for multi-catch traps, the Passive Infrared Motion Sensor detects pest activity with high accuracy.

Kiwi & Kiwi +

Our Kiwi and Kiwi Plus devices, equipped with dual sensors—vibration and magnetic reed switch—are designed for reliable remote monitoring of animal traps.

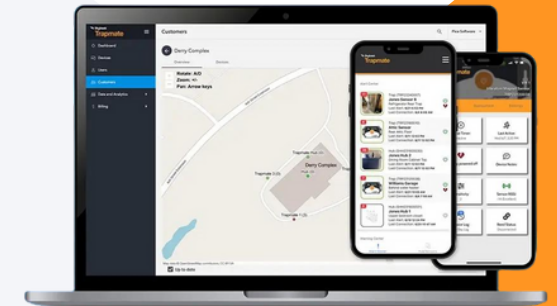

The Kiwi + offers enhanced durability with added waterproofing, ensuring even greater performance in harsh conditions

Skyhawk CE App

Easily manage all your traps and Trapmate devices with our custom software, accessible on your iOS or Android smartphone, giving you full control wherever you are.

Enterprise Portal

Effortlessly manage your team's devices and access real-time trap activity reports through our enterprise portal, available on any browser.
